

SEPA Payment Status Report
ISO 20022
Technical Specification

Message name pain.002.001.02

A Payment Status Report is produced when files fail the reception controls or every time the PmtInfo or Transaction fails booking attempts. Additionally a Payment Status Report is also produced when the SCCT material has passed technical and content validation.

GrpSts shows the status of the material as one of the following ACTC, ACCP, RJCT, PDNG or PART. RJCT is a rejected file, PART is a partially accepted file, PDNG is a file where transactions are still pending, ACTC status is a file that has passed technical validation and ACCP is the status for a file that has also passed content validation.

The status report uses the UTF-8 character set.

For showing all characters correctly in the message it should be retrieved in Binary form.
